

# “Dollar Double-Heart” by ???

Diagrams by Steve Hecht.

1. Form a water-bomb base at each end of the bill.

2. Mountain-fold and unfold. Then unfold entirely.

3. Pleat, bringing existing mountain-crease to the crease from the previous step. Unfold.

4. Fold in half.

5. Squash. The valley-crease exists. Check back side to ensure accuracy.

6. Squeeze-fold. All creases exist. X-ray lines are hidden valley-folds.

7. Squash-fold on existing creases.

8. Petal-fold. X-ray lines are hidden valley-folds.

9. Reverse-folds.

10. Fold two points up.

11. Two more reverse-folds.

12. Repeat steps 5-11 on the other end.

# “Dollar Double-Heart” (continued)

Diagrams by Steve Hecht.

13. Turn over, top-to-bottom.

14. Fold approximately in thirds and unfold. There are two layers in the upper fold.

15. Fold one layer down on previous crease.

16. Fold up on existing crease.

17. Valley down and tuck corners inside. Then turn over, side-to-side.

18. Valley-fold four corners.

19. Detail of right side: squash the four points. With the upper corners, squash the extra internal layer downwards.

20. Valley-fold the angle-bisectors. Repeat on the other three squares. [Tip: for the two thick ones, combine this step with the next.]

21. Squash the two edges (a toothpick helps). Repeat on the other three sections.

22. Trim corner (one mountain, one valley). Repeat on left side of heart.

23. Repeat steps 18-22 on left side of model.

24. Finished. Spread lower points to make it stand.
